Live WWDC keynote coverage

By [Jacqui Cheng](#) | Published: June 11, 2007 - 12:15PM CT

Good morning Ars readers! We're at Apple's WWDC '07 keynote live, getting ready for things to get rolling. Lines were insane this morning; people have been saying that it's the largest WWDC attendance in history. Developers are expecting a lot out of today's keynote, including (of course) lots of Leopard announcements as well as iPhone info. So far there's nothing on stage but two displays, but the music is pumping and so is the crowd.

The Steve confirmed to present at WWDC

No spoilers WWDC keynote video link

Ars at WWDC '07

3 hours of WWDC keynote goodness penciled in (Updated)

We'll be updating **right here** on this page, live, with transcriptions of what's going on during the 90-minute presentation. Refresh this page, and stay tuned for more!

Live updates (newest at bottom):

- People getting seated, music playing
- "PC guy" (John Hodgeman) comes out says "I'm Steve Jobs"
- Real Steve comes out, praises Intel switch
- 950,000 developers, 159 sessions this week
- 94 hands on labs, 1,200 apple engineers on site
- Steve invites Intel CEO Paul Otellini on stage, gives him a stainless steel design award
- EA's Bing Gorgon comes on stage, talks about his two teenage daughters with macbooks, all want games
- Command and Conquer 3 to come to OS X, BF 2142, NFS Carbon, Harry Potter and Order of Phoenix
- Harry Potter
- Simultaneous release of Madden and Tiger Woods
- iD games news, John Carmack is going to demo something premiering today
- Tech is called iD Tech 5
- Build the game, make sure it's fun, put artists on it to work on it at the same time
- Demoining at E1 as well as quakecon in August, special Mac-related announcement at that time
- Onto Leopard. Currently 22 million Mac OS X users, 67% using Tiger
- Another 23% running Panther, only 10% running an older release than that
- 20 million out of 22 million running the current release
- Today we move beyond tiger to give a final look at Leopard shipping in October
- 10 new features shown (out of 300 new features)
- Leopard has a new desktop (background... har har!)
- Apple has come up with a desktop more suited to your digital photos with a menubar that adapts itself to whatever you want there
- New menu bar, new dock, "Stacks" to clean up your desktop
